## **RE-ROOFING APPLICATION/GENERAL COMMENTS**

- If a contractor is conducting the work, they are to have an Illinois State License. You will need their license number and expiration date. If the owner/occupant is conducting the work, they do not need an Illinois license.
- Code requires removal of the existing roof if more than two layers exist. Layers must be the same thickness (1 or 2 layers) in the event of partial repairs.
- If the new roof will be placed over one (1) layer of roofing, roof vents, plumbing stacks, and furnace flue pipes must be re-flashed into the new roof to prevent any added water running between roof layers.
- Ice and water shield must be used along the lower roof edge and extend 24" inches past the wall face (warm side) of the roof area to prevent ice buildup damage from getting under the shingles.
- A double starting row of shingles is required.
- Proper attic ventilation will be required for re-roofs as per IRC 2021 code to help extend the life of the roof.
- Minimum 2/12 pitch for asphalt shingles with double underlayment.
- It is the responsibility of the applicant to schedule the required inspections as defined on your permit.
- In the event that unexpected roof damage is encountered such as decayed plywood or failed trusses/rafters, you will need to contact the building department to determine the extent of the necessary replacement of the damaged materials.
- Please contact Casper Manheim, Building Inspector, at 815-440-2146, with questions.
